Mean 32.362; Variance 134.055; scale 0.241 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ΡA	(FARM ) FARMITALIA ERBA SRL CARLO.
ΡΙ	Battistini C, Carminati P, Garofano L, Mazue G, Unqheri D;
DR.	
PT	Synergistic antiviral composition contains BFGF and sulphated
PT	polysaccharide - for treating viral infections e.g. HSV-1 and -2,
ΡŢ	cytomegalovirus, HIV, influenza virus etc.
PS	Disclosure; Page 4; 20pp; English.
ပ္ပ	This sequence represents acidic fibroblast growth factor (aFGF).
႘	aFGF, or its fragments may be used in a synergistic compsn. with an
႘	antivirally active sulphated polysaccharide, and one or more
႘	excipients. The compsn. may be used to control herpes simple: virus
႘	(HSV-1 or -2) herpes varicella/zoster; cytomegalovirus; influenza;
ပ္ပ	human respiratory syncytial virus; Semliki Forest virus; H.V or
႘	Moloney Sarcoms virus. The combination of aFGF with sulphased
႘	polysaccharide is found to have a greater antiviral activ: y than
႘	expected for an additive effect. See also R25913-5.

Human acidic fibroblast growth factor.
Endothelial cell growth factor; ECGF; blood vessel; regeneration;
Endothelial cell growth factor; score; conservation;
FGF; fibroblast growth factor; ss.
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant human acidic fibroblast growth factor - used to promote cell growth, to promote wound healing, for vascular grafts and blood vessel repair
claim 2: Column 30: 25pp; English.
Oligonucleotides were synthesized on the basis of the amino acid sequence of bovine acidic fibroblast growth factor (aFFF) and used to produce a synthetic gene (given in Q88233) incorporating codons preferred by E. coli or mammalian cells, unique cloning sites, etc. This synthetic gene was mutagenized to obtain a gene encoding a human recombinant aFGF (R74647) having activity sequence 140 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      136 AMDIDGLLYGSQIPNEECLFLEFLEENHYNTYISKKHAEKNWFVGLKKNGSCKRGPRTHY

FGF mutein prepn. useful for therapy of burn or thrombosis - by contg. DNA encoding FGF mutein
Disclosure: Page 3: 23pp; Japanese.
The invention covers muteins of FGF (esp. bFGF) which contain at least one glycosylation site. The muteins can be used to treat burns and thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                66 AMDTDGLLYGSQTPNEECLFLERLEENHYNTYISKKHAEKNWFVGLKKNGSCKRGPRTHY 125

Isolated, purified, biologically active bovine beta endothelial cell growth factor - useful to regenerate or treat damaged blood vessels bisclosure; Fig 8: 28pp; English.

Bovine beta-endothelial cell growth factor (beta-ECGF; W0399) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-Sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other endothelial cell-lined structures.

Human ECGF (737503) or fragments may be obtained using oligonucleotides (737504 to 737508 to 737509) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            136 AMDIDGLLYGSQTPNEECLFLERLEENHYNTYISKKHAERNWFVGLKKNGSCKRGPRTHY 195

Mitogenic polypeptide isolated from human brain tissue - useful for increasing vascular effect in eq wound healing, or generating endothelial cell linings for vascular prostheses, etc. [Claim 3; Page 1; 31pp; English.

The PF of the invention was obtd. from human brain tissue. It has a mol. wt. of 15,200'-16,500 (pref. 15,61e-16,056) and has a high affinity for heparin. PF1 and fragments are useful for promoting prowth of mesoderm-derived cells or neuroectoderm-derived cells and generating endothelial cell linings for vascular prostheses (all Sequence 140 AA:

Disclosure; Fig 1: 19pp; Japanese.

Disclosure; Fig 1: 19pp; Japanese.

The was deduced from a gene used to produce recombinant aFGF.

Peptides derived from the protein, esp. from A-D can be used to as mitgens to produce anti-aFGF antibodies. The peptides must comprise B-10 continuous AAS from A or B (claims 5 and 6 resp.),

7-10 continuous AAS from C (claim 7), or 8-9 continuous AAS from D (claim 8). The ABS can be used for immunochemically measuring aFGF, and for purifying aFGF. They are useful as reagents in the diagnosis of various cancers or diseases of the CNS. Purified aFGF has wound healing and nerve cell proliferating properties.
                                                                                                                                                                                                                                                                                     66 AMDTDGLLYGSQTPNEECLFLERLEENHYNTYISKKHAEKNWFVGLKKNGSCKRGPRTHY 125

DNA encoding a cleavable signal peptide and an endothelial cell growth factor ruseful for producing recombinant endothelial cell growth factor proteins care for most signal for producing recombinant endothelial cell growth factor respective and plasmine acid sequence of human beta-endothelial cell growth factor (EGGF). The invention is directed to DNA encoding alpha or beta-EGGF and plasmids comprising the DNA sequences. The DNA encodes a cleavable signal peptide and an EGGF, where removal of the signal peptide EGGF proteins, which can be used in treatments to repair or regenerate blood vessels or other structures lined with endothelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated, purified, biologically active bovine beta endothelial cell growth factor.

- useful to regenerate or treat damaged blood vessels bisclosure; Fig'8: 28pp; English and the beta endothelial cell growth factor (beta-ECGF; W03999) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-Sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other endothelial cell-lined structures.

Human ECGF (137503) or fragments may be obtained using oligonucleotides (137504 and 137508 to 137509) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                         80 AMDTDGLLYGSQTPNEECLFLERLEENHYNTYISKKHAEKNWFVGLKKNGSCKRGPRTHY 139

incorporates useful restriction sites at frequent intervals to
facilitate cassette mutagenesis of specified regions.
Claim 2; Fig 3a. 12pp; English.
C The synthetic aRGF gene incorporates useful restriction sites at
frequent intervals to facilitate the cassette mutagenesis of
requent intervals to facilitate the cassette mutagenesis of
selected regions. Also included are flanking sites to simplify
the arGF mol. acts in a cascade effect to control endothelial cell
activity either co-ordinately through synergistic effects or via
independent routes. The regulation of endothelial cells is essential
in the protection of arteries, veins and capillaries from the effect
of thrombogenesis. Their stimulation and control by these factors is
also thought to be important in the development of tumours and

Human recombinant endothelial cell growth factors (ECGF) beta (W06816) and alpha (W06817) differ only at their N-terminal ends. They can be produced in transformed prokaryotic or eukaryotic host from the complete human ECGF cDNA (14598). Large quantities of the ECGFs are produced by culturing the host cells and recovering the ECGFs are produced by culturing the host cells and recovering the proteins. ECGFs have utility in the growth and amplification of endothelial cells in culture. They can potentially be used to structures, and also have diagnostic appins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant human endothelial cell growth factors - for treating

To compositions for promoting wound healing - containing endothelial

compositions for promoting wound healing - containing endothelial

real growth factor polypeptides

claim 1; Column 16; 23pp; English.

This sequence represents the amino acid sequence of the mature human

beta-endothelial cell growth factor (b-ECGF). This amino acid sequence

is identical to the alpha-ECGF but the beta sequence contains an extra

No N-terminal amino acids. The sequence was isolated from a human brain

the compositions for promoting wound healing. ECGF protein can be used in

compositions for promoting wound healing. ECGF is also used to grow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Novel fusion proteins comprise FGF linked to saporin. FGF-1 to -9 may be used, pref. FGF-1 (R70812), FGF-5 (R70813), FGF-7 (R70814) or FGF-8 (R70815) muteins, in which at least 1 Cys residue is replaced by conservative Ser substitutions. The fusion proteins are potent cytocidal agents to cells bearing the FGF receptor.

Example; Fig 8; 45pp; English.

To screen the human brain stem CDNA library for clones contg. ECGF inserts, a specific oligonucleotide was designed. This oligonucleotide was based upon a partial AA sequence analysis of the amino terminus of ECGF (see P70480 and P70481). Fig 3s sets forth for comparison the AA sequence of cyanogen bromide-cleaved bovine alpha and beta ECGF (P70834). The two clones that were isolated, ECGF clones 1 and 29, were analysed in further detail. The nucleotide sequence of these clones and the AA sequence deduced from the nucleic acid sequence is shown in Fig 8 (see N70788 and P70482).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21 GNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETGQYL 80

The acidic and basic fibroblast growth factors are the major endothelial-cell growth factors. Both are angiogenic agents in vivo and are potent mitogens for a variety of mesoderm-derived cell types in vitro (although bFGF is 30-100 times more potent than aFGF in stimulating the proliferation of normal diploid cells). There are differences in the tissue distribution and concentration of these two growth factors.

This protein binds heparin, although less strongly than does bFGF.
This protein binds heparin, although less strongly than does bFGF.
There are some sequence similarities between residues 117-126 (a region flanked by Lys-Lys dipeptides) and a number of neuropeptides, including a gastrin-releasing peptide from the pig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              #authors Risau, W.; Gautschi-Sova, P.; Boehlen, P.

Title: Description: Perfect Score: Sequence:

PAM 150 Gap 11 Scoring table:

85661 seqs, 30989116 residues Searched:

Minimum Match 0% Listing first 45 summaries Post-processing:

1:swissprot swiss-prot38 Database:

Mean 45.430; Variance 71.241; scale 0.638 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS
IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN
VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRINTS; PR00262; ILIHBGF.

-!- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS
IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN
VITRO. THERE ARE DIFFERENCES IN THE IISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         123
